

Oilseeds: World Markets and Trade

Argentina Sunflowerseed Harvest Bolsters 2025/26 Global Supply

Argentina’s near record sunflowerseed crop is expected to help replenish global supplies, both via exports of sunflowerseed meal and oil and exports of sunflowerseed to Black Sea crushers. While Argentina produces only around one-tenth of the world’s sunflowerseed, the timing of their harvest and recent production growth are meaningful. Argentina’s southern hemisphere harvest starting in February falls later than major Black Sea producers harvesting in September, providing a counter-seasonal boost to global supplies that can be impactful in years of lower production. Argentina sunflowerseed production is forecast at 7.0 million tons in marketing year 2025/26 (March 2026 – February 2027), up 25 percent year over year, driven by area growth.

Argentina Share of Global Sunflowerseed Production

Global sunflowerseed production grew in 2025/26 from the previous year’s 5-year low. Despite another year of poor yields for major Black Sea producers, gains were driven by area growth in Argentina, Kazakhstan, Russia, and the United States. However, low production in Ukraine, the European Union, and Turkey contributed to a less-than-adequate recovery in supplies amid strong demand globally. Consequently, sunflower oil export prices have continued to climb, averaging nearly \$1,300/ton FOB from September 2025 – March 2026 compared to \$1,100/ton during the same period last year.

Argentina harvested its bumper 2025/26 sunflowerseed crop in February and exports rapidly commenced, totaling 300,000 tons in February (the last month of the 2024/25 marketing year) and continued strong in March at approximately 200,000 tons. These volumes far exceed typical volumes, with annual exports averaging less than 200,000 tons as most output is crushed domestically. As a result, 2024/25 exports are forecast at 624,000 tons and 2025/26 exports are forecast at 600,000 tons, reaching multi-decade highs. The shipments have largely been destined for the European Union – particularly Bulgaria and Romania – where crush margins are high due to high sunflower oil prices. Despite high sunflowerseed exports, the large Argentina crop is also expected to enable the highest exports in over 25 years of both sunflowerseed oil – up 8 percent to 1.8 million tons – and sunflowerseed meal – up 9 percent to 1.8 million tons.

OVERVIEW 2025/26

Global oilseeds production is raised this month due to higher Russia sunflowerseed, Paraguay soybeans, and Pakistan and India cottonseed, more than offsetting lower China peanuts and Uruguay soybeans. Global oilseeds trade is unchanged on lower U.S. and Uruguay soybeans offset by higher Brazil and Paraguay soybean shipments. Global crush is raised on U.S. and Brazil soybeans and Russia sunflowerseed. Global oilseeds stocks are lowered on reduced Argentina and Brazil soybean and Australia and China rapeseed carryout. Global protein meal trade is raised on Russia sunflowerseed meal. Global vegetable oil trade is raised on Russia sunflowerseed oil exports.

The projected U.S. season-average farm price for soybeans is raised 10 cents to \$10.30 per bushel.

EXPORT PRICES

Over the past month, U.S. soybean export prices declined after news that the Trump-Xi summit will be delayed until mid-May. After this steep decline, prices vacillated around \$460/ton. Similarly, Brazilian soybeans experienced volatility and declined on news of the delayed summit. Since an initial decline in mid-March 2026, Brazilian soybeans recouped price losses and ended flat on the month—aided by a rising Brazilian real and higher petroleum prices.

U.S. soybean meal prices surged widening the premium between U.S. and Brazilian origin. Continuation of South America's harvest and high crush driven by advancing soybean oil prices have kept South American soybean meal prices subdued.

All vegetable oil prices made gains over the past month. U.S. soybean oil hit highs last seen in summer 2023, sustained by high petroleum prices and final EPA Renewable Volume Obligation standards. Similarly, both Brazilian and Argentine soybean oil prices have rallied with petroleum and gains in U.S. soybean oil. Palm oil prices rose only slightly and returned to trading at a discount relative to South American soybean oil.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
